

# GLOBAL WARMING

The situation is critical. Hurricane Katrina was just one of many warning signs that global warming now poses grave dangers to the planet. The era of cheap oil is moving toward a close, posing grave dangers to our economy. Our political leaders ought to be alarmed – yet they continue to fiddle while the planet burns.

The response of the Bush administration and the Republican and Democratic leadership to this dual crisis is astoundingly irresponsible. Both Republicans and Democrats in Congress have caved in to the demands of Big Oil, Big Auto and the highway lobbyists.

What is needed is a major, historic national and international initiative against global warming. A serious effort to build a sustainable energy future is not only necessary for all life on the planet; it will be good for our economy,

creating hundreds of thousands of new, quality jobs. We need to convert from fossil fuels and nuclear power to safe, clean, renewable sources of energy like solar, wind, geothermal, biomass and fuel cell technologies. Equally important are energy conservation and efficiency, including energy-efficient transportation.

The Green Party is well suited to lead the charge.

Unlike the Democratic and Republican parties, we do not accept corporate campaign contributions. We are building a true party of the people because we want to restore government of, by and for the people, instead of government dominated by big money.

*Adapted from a speech by Rich Whitney, 2006 CP candidate for Governor of Illinois*
